

## REGULATORS

Ready to meet any diving challenge, from an off-shore specimen hunt to an explorer's deep descent! At any depth, in any position, Aqua-Lung regulators automatically furnish air equal to the diver's breathing demand. All are equipped with nonreturn valves. All mechanical parts are durable, high-polished, chromed navy brass—forgings, not castings. Every Aqua-Lung far exceeds the requirements set forth for U.S. Military and Allied Government use and is unconditionally guaranteed.

### A THE ROYAL MASTER

Constant over all ranges of cylinder pressure and during the most rugged diving conditions, the Royal Master is a regulator for those who want the best. A balanced first stage in the famous Aqua-Master gives this kingly regulator an even smoother performance. All fluctuations are eliminated—you find sensitive response to the slightest suction effort—easier breathing! Royal Master exceeds professional and military diving standards. Its features include:

- Balanced Aqua-Master first stage.
- Larger orifice for better flow at depth.
- Comfortable Kleer E-Z mouthpiece.
- Tough, hi-stretch, nondeteriorating black hose.
- Durable, high-polished, chromed-brass housing.
- Special Hookah attachment.

### B THE AQUA-MASTER

Recognized king of professional regulators, the Aqua-Master is known as "Mr. Reliable" among commercial divers. Military services throughout the world specify it as their official regulator. Among sport divers, it is the most popular and most purchased regulator in America. Designed for men whose underwater work is strenuous, two-stage Aqua-Master keeps the breathing resistance at a low level regardless of the air the diver requires. It features tough, hi-stretch non-deteriorating hose, Kleer E-Z mouthpiece, durable chromed-brass housing and a special Hookah attachment.

### C ROYAL MISTRAL

NEW! IMPROVED! Balanced valve adds a new breathing dimension to the Royal Mistral. High-pressure air taken from the cylinder and reduced in a balanced single stage valve provides the diver with effortless breathing ease even working at depths to 300 feet. Venturi action moves dense air at depth in a jet stream action that greatly reduces suction effort.

High-polished chrome-plated housing, simple single-stage construction, proven reliability and performance, black Kleer E-Z hose and mouthpiece.

### D THE MISTRAL

Workhorse of Aqua-Lung regulators, the Mistral was developed and perfected by Capt. Jacques Cousteau for use by his diving team. A single-stage regulator with a special Venturi action that takes the effort out of breathing, this is the one used and approved by the French Navy. It is famous for simplicity of operation and maintenance. Housing is rugged, chromed brass. Tough, hi-stretch hose, Kleer E-Z mouthpiece.
